

STELTRONIC NEWS

LONGEVITY EQUALS CONFIDENCE

HISTORY MATTERS

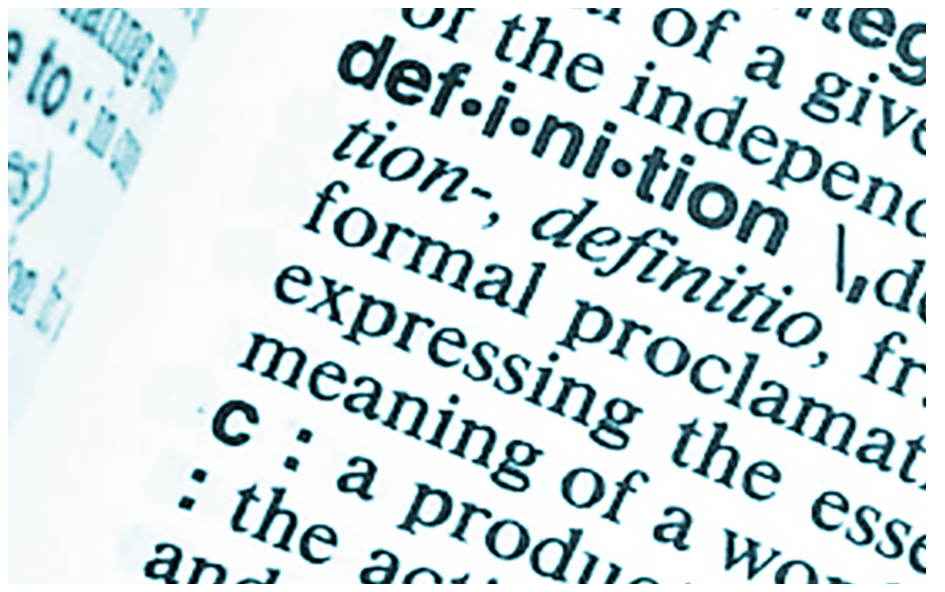

Steltronic was established in 1980 and with a 1995 automatic scoring installation in Tennessee, we made history with the very first Windows 95 based automatic scoring system. Those were the days of heavy CRT monitors and only a few pinsetters to interface with, however with the changing of the times and LED flat screen monitors, and newer pinsetters with new technology, Steltronic has remained a huge presence worldwide. With more than 19,712 lanes of automatic scoring installed in 84 countries, a company with that kind of portfolio is something you can be comfortable with on your next scoring purchase.

INTEGRATIONS & THE INTERNET

When the Internet became popular, along with wireless technologies, Steltronic was no stranger to this technology. We had to react by creating hardware & software for many of the 3rd party companies that wanted to join Steltronic by working seamlessly together benefiting the bowling center. With integrations for cashless operations, liquor controls, USBC tournaments, digital lighting for the bowling pins, point-of-sale terminals, and bowling ball tracking on the lane surface for animated entertainment of the players, we continue to keep up with the changing times.

HIDDEN FEES AND LICENSING

When you think of Steltronic, you're making an investment into your business

Steltronic Longevity

that really is a “no hidden future costs” company. We believe you don't like surprise invoices, especially those invoices for front desk/back office licensing fees that seem to show up a year or two after you make your initial purchase.

We guarantee:

- NO charges for “future” software licensing.
- NO charges for technical support or incidents.
- NO charges for software updates.

LOYALTY FOR THE LONG TERM

Some of the Steltronic customers have been with us for the long haul dating back to 1995, and continue to upgrade

their scoring to the latest and greatest Focus system. Some of our loyal customers used our first scoring system with static graphics, then moved into our animated graphics package, and now enjoy our patented 3D animations in high definition.
