

STELTRONIC NEWS

BOWLING PINS ARE ALL SHAPES AND SIZES

10 PIN – 5 PIN – DUCKPIN – CANDLEPIN

When Steltronic® started in the bowling business back in 1980, we had a good idea of the different types of pinsetters along with different shapes of bowling pins, however we really did not know how many different configurations existed. As our business grew, and the demand for automatic scoring became necessary, Steltronic is currently able to interface our scoring system hardware with 37 different types of pinsetters and 19,700 lanes installed worldwide. The different styles and sizes of bowling pins found today such as duckpin, candlepin, ten pin, and five pin bowling can be “counted” by our newest PinCam camera, along with the different ways to keep score are all supported with the Steltronic Focus software system.

SWITCHES & RELAYS & RS-232

With the first pinsetters using relays, contactors, lots of wire, belts and pulleys, along with limited electronics, the automatic scoring systems by Steltronic worked with these automatic pinsetters using the older technologies from the pinsetter manufacturers. With the advancement of electronics, and direct communication and RS-232 protocols, the scoring system now “communicates” directly to the pinsetters manufactured today. This means less hardware to purchase, not very much in the way of wiring – interfacing, rather a new plug and play system to speed things along during installation.

Vintage Bowling Pins

WE WERE FIRST WITH WINDOWS 95

Going all the way back to 1980, our first version of bowling center financial management was designed in DOS, while advancing technologies and demand from the consumer to be Windows compatible, we introduced WINS software in 1995 that was the very first 100% Windows based automatic scoring software for the bowling business.

FREE FOR LIFE

Since 1980, Steltronic remains the sole company offering free technical support and free Steltronic software updates for the life of your system. Our company is

not something new, as we have been around since 1980 serving the bowling industry with more than 19,700 lanes of automatic scoring installed worldwide.
